iNet Final Term Project

This Project is a Test Grade and Daily Grades
Points will be deducted from your Daily Grades if you are not working

- Open the file in your ICS Lab Intranet Page
- Save the file in your iNet Folder correctly
- Example: ==17-7A-PerezFaith==-iNetTermFinalProject

Directions:

This is going to be an internet research project. Each day you will be given a new topic to research on.

- **1st – Research on COMPUTERS – 150 words**
- **2nd - Research on COMPUTER INPUTS – 100 or more words**
- **3rd - Research on COMPUTER OUTPUTS – 150 or more words**
- **4th – Research on Computer Storage – 100 words**
- **5th – Research on "what is the world Wide Web"? 100 words**

Helpful questions for your research

- Write about when it was first created
- Why did they create it
- Who created it
- What did it look like
- What was it able to do
- How has it changed
- What can it do in comparison to then
- How has a computer helped you
- **At the end of the document you will place two small pictures of the item**
- **This document needs to have**
  - Word count is next to topics
  - Indent your paragraphs
  - Check your spelling
  - Do not copy from the Web – its plagiarism – cheating! Principles will be notified.
  - Copy URL's where information was found
  - Place two pictures at the bottom
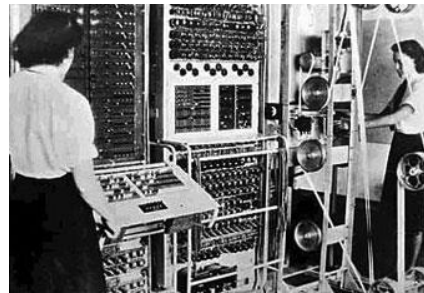

Example and Rubrics on next pages

Computers

    Day one topic is computer. It was first created in 1946. The reason it was created is because it was made to make human life easier and make complex mathematical calculations possible. J. Presper Eckert and John Mauchly made the first computer. The computer had 18,000 vacuum tubes, it took over 167 square meters of the floor, and it had punched cars for the input and output. It was able to form development elsewhere. It was changed to be more advanced in games, graphics, in speed, added more information, and able to send things to other people. Our computers now can program machines and can help us with our work. A computer has helped me in helping me in school. All I would need to do id look up the information needed and it would be there. It has even helped me with a distraction from my parents breaking up. The computer also helps me talk to my friends when I need to. The computer has taught me how to do real life things. All I need to do is look at the internet or look at YouTube and search up search I need. The computer is interesting to learn about and all of its programs. (word count)

Inputs

    Computers are interesting but in order for it to work you need something to control it with. The things that you use to control the computer are called in-put devices. Some examples are keyboards, mouse, scanners, and joysticks. The creator of the keyboard was Christopher Latham Sholes. He created it between February 14, 1819-February 17, 1890.   The first key board looked like long sticks then a circle at the end. The creator of the first mouse was Douglas Engelbart. It was created it in the early 1960's. It looked like a block of wood with an odd shape piece of metal. It also had a tiny button on the corner of the block. It had a wheel at the front. At the back of the block it has a wire like most mousses today do. The mouse also shows a wheel on the side of it. (Word count)
